EXPERIMENT NO. 2 **NAME: KRISHNA KUMAR MS**

ROLL NO: 240701622

Setting Up a Zoho Creator Account and Exploring the Platform Architecture and Interface

1. Aim:

To set up a Zoho Creator account, create a sample application using forms, reports, and a dashboard, and explore the Develop, Deploy, and Manage sections of the platform.

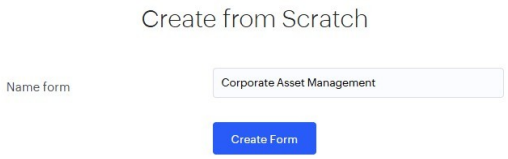

2. Setting Up Zoho Creator:

I. Create the Sample Application

Procedure:

1. Logged in to Zoho Creator.
2. Clicked Create New Application.
3. Selected From Scratch.
4. Entered the application name as Corporate Asset Management.
5. Clicked Create.

Output:

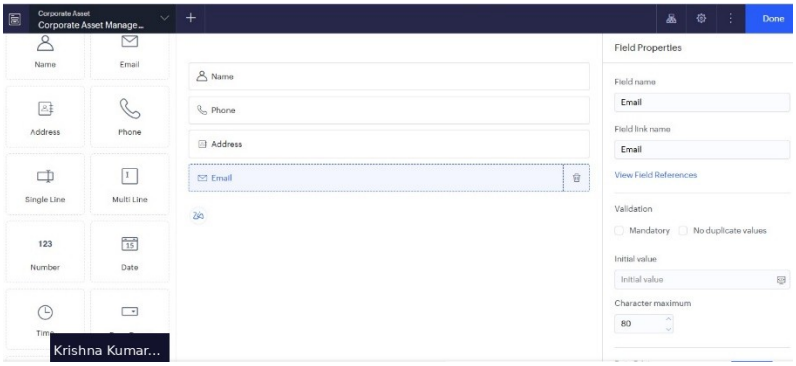

II. Creating Form

Procedure:

1. Clicked Create → Form.
2. Entered the form name as Corporate Asset Management.

3. Added the required fields such as Department ID, Department Name, Department Head, and Department Location.
4. Saved the form.

Output:

Explanation:

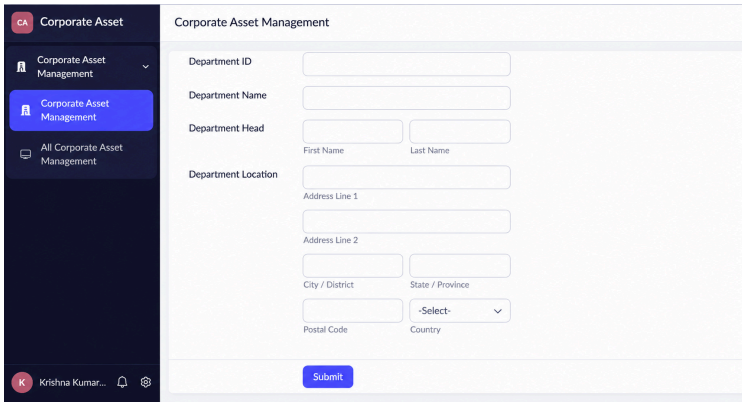

A form is used to collect information from users. It contains various input fields where users can enter data. The submitted data is stored in the application's database for centralized asset and department management.

III. Creating Report

Procedure:

1. Clicked Create → Report.
2. Selected the Corporate Asset Management form.
3. Created the report and saved it.

Output:

Explanation:

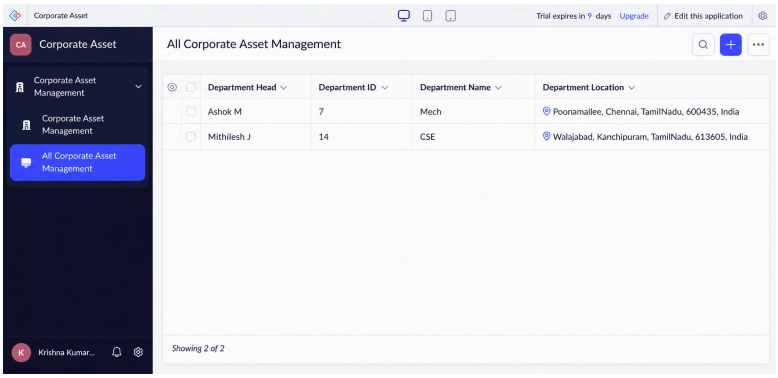

A report displays the department and asset-management records entered through the form. It helps users search, sort, filter, and manage the stored data efficiently.

IV. Creating Dashboard

Procedure:

1. Clicked Create → Dashboard.
2. Added required report/chart components.
3. Saved the dashboard.

Output:

Explanation:

A dashboard provides an overview of corporate asset and department data. It combines reports and charts in a single page, making it easier to analyze information quickly.

3.Exploring the Platform Architecture and Interface:

Develop (Application Creation & Customization):

- Built-in drag-and-drop form and report builders.
- Native Deluge scripting engine for complex business logic.
- Low-code workflow automation for multi-stage approvals.
- Custom HTML/CSS pages for personalized user interfaces.
- Advanced data validation and conditional UI formatting.
- Sandbox environments for development and testing.

Deploy (Application Distribution & Governance):

- Multi-channel publishing across web, iOS, and Android.
- Role-based access control (RBAC) for application security.
- Customer portal provisioning for external user access.
- Version control to track and roll back changes.
- Custom domain mapping for white-labeled applications.
- Single Sign-On (SSO) integration using SAML and Active Directory.

Manage (Administration & Operations):

- Centralized user provisioning and license management.
- Automated data backup with recovery options.
- Integration dashboards for managing APIs and webhooks.
- Audit logs for tracking user activity and data modifications.
- Performance analytics and application health monitoring.
- Data security and encryption management.

4.Result

Thus, a Zoho Creator account was created successfully. A sample application with a form, report, and dashboard was developed, and the Develop, Deploy, and Manage sections of the Zoho Creator platform were explored successfully.
