EXPERIMENT 3

Survey Report on Emerging Trends in Low-Code Application Development

Application Selected: Gym Membership Enrollment Form — Basic Fields Use Case
Platform: Zoho Creator

1. AIM

To study emerging trends in low-code application development and understand how Zoho Creator can be used to develop a Gym Membership Enrollment Form with minimal coding using basic fields, validation and workflow features.

2. Traditional Application Development vs Emerging Low-Code Application Development

Traditional Development	Low-Code Development
Requires extensive programming	Requires minimal coding
Development takes more time	Faster application development
Requires skilled programmers	Can also be developed by non-experts
UI and database are usually coded manually	Visual drag-and-drop interface
Testing and deployment require more effort	Faster testing and deployment
High customization	Customization depends on platform
More control over application architecture	Platform manages much of the infrastructure

LC-02 Basic Fields: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox.

3. Benefits and Challenges of Low-Code

Benefits

- Faster development
- Less coding effort
- Easy form creation
- Rapid prototyping
- Easy workflow automation
- Reduced development cost
- Easier maintenance

Challenges

- Limited customization in some cases
- Platform/vendor dependency
- Security concerns
- Integration limitations

- Performance limitations for complex applications
- Licensing costs

4. Comparison of Existing Platforms

Platform	Main Use	Key Feature
Zoho Creator	Business applications	Visual application builder
Microsoft Power Apps	Business applications	Microsoft ecosystem integration
Mendix	Enterprise applications	Rapid low-code development
OutSystems	Web/mobile applications	Full-stack low-code development
Appian	Business processes	Workflow automation

Platform selected for this experiment: Zoho Creator is used to develop the Gym Membership Enrollment Form with all 13 Basic Fields, validation rules, report generation and workflow features.

OUTPUT

The screenshots provide output evidence of the developed Gym Membership Enrollment application in Zoho Creator.

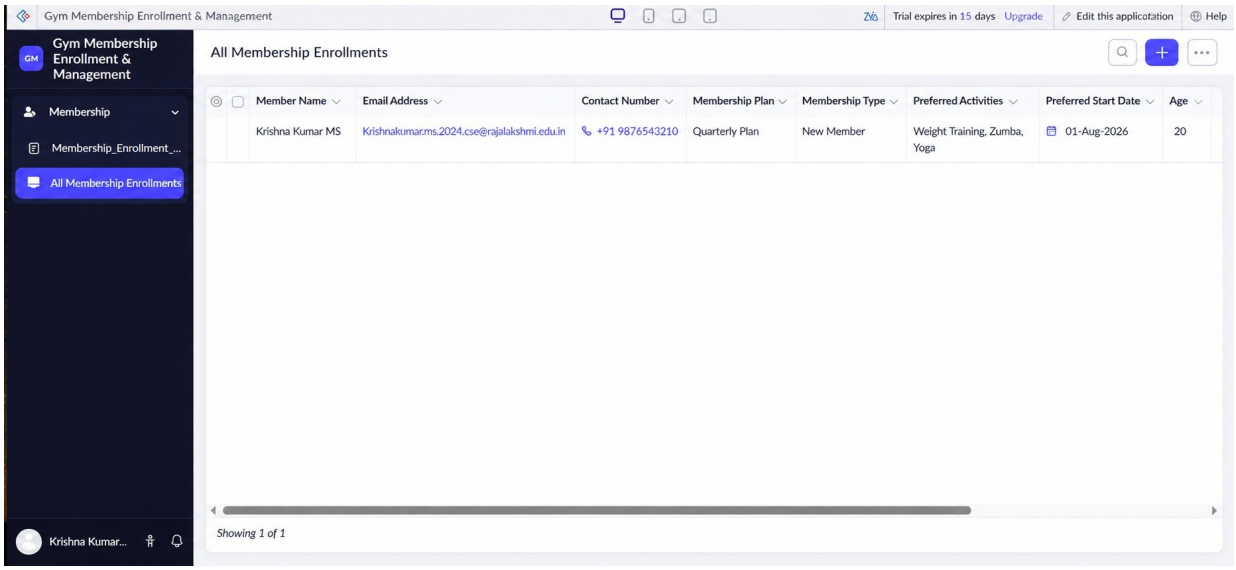

Figure 2: Membership_Enrollment_Report — output view.

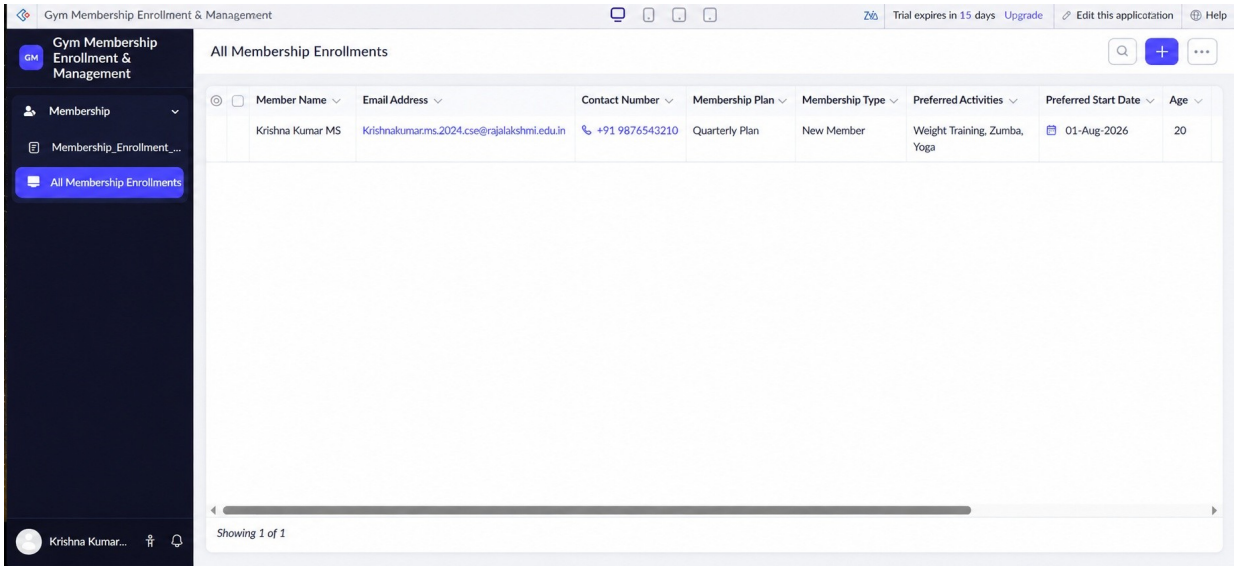

Figure 1: Gym Membership Enrollment Form showing a submitted membership record.

5. RESULT

The study of low-code application development was successfully completed. The Gym Membership Enrollment Form can be developed using Zoho Creator with all 13 Basic Fields, validation rules, reports and workflows with minimal programming effort. The experiment demonstrated how low-code platforms simplify and accelerate gym member enrollment.

Practical Work / Evidence to be Added

1. Screenshot of the Zoho Creator Form Builder showing all 13 Basic Fields in Membership_Enrollment_Form.
2. Screenshot of the live/preview Gym Membership Enrollment Form.
3. Screenshot of Membership_Enrollment_Report showing at least 3 submitted member records.
4. GitHub repository link containing the report and practical-work evidence.
